Table 1: Comparison of clustering inertia (left) and CPU time (right) among KSKM, KSKM_E, and PCCC with no step of centroid mutation, reported as multiples of the baseline method (KSKM) across datasets. Lower inertia and smaller time multiples indicate better performance.

Dataset	Stats Method Constraint Level	Inertia KSKM	KSKM_E	PCCC	CPU Time KSKM	KSKM_E	PCCC
COL1	0.05	1.00	1.00	1.00	1.00	4.09	25.84
	0.1	1.00	1.00	1.00	1.00	5.84	27.47
